

ACI Training Course

Code (TSC1)	ISO 28000 Supply Chain Security Effective Application (9:30am – 5:00 pm) 1 day
--------------------	--

Overview

Nowadays, supply chains play a critical role in world-wide business. Disruptions in any parts of the supply chain could paralyze and cause enormous economic loss such as hurricanes, earthquakes, tsunami, as well as terrorist and criminal activities. In order to respond to this challenge, ISO 28000 outlines the requirements to enable an organization to establish, implement, maintain and improve a security management system, including those aspects critical to security assurance of the supply chain. It can be expected that ISO 28000 will become one of the co-operative components of a globally secure supply chain. No matter you are serving internally or providing services to your valuable customers, you and your company should not miss this opportunity to learn and apply the best practice into their daily operation to better manage existing supply chain management services in an effective approach.
